

Another exercise

- In pairs, think for a moment, with the person next to you, about how you would code that classic children's favourite, *99 bottles of beer*.
- In case you don't know the song, check the lyrics here <http://www.99-bottles-of-beer.net/lyrics.html>
- We need a class with a `main()`, an `int` and a `String` variable, a `while` loop, and an `if` test.

```
public class Main {  
    public static void main (String[] args) {  
        int beerNum = 99;  
        String word = "bottles";
```

```
    } // end main method  
} // end class
```
