

the **do-while** statement

```
do {  
    statement (s) ;  
} while (condition) ;
```

- The while statement is a pretest loop; that is, it tests the condition first and at the beginning of each pass through the loop
- Java also provides a posttest loop: the do-while statement
- This type of loop is useful when you need to run the loop body at least once

the **do-while** statement
