

```
public class Main {  
    public static void main (String[] args) {  
        int beerNum = 99;  
        String word = "bottles";  
  
        while (beerNum > 0) {
```

```
        } // end while loop  
    } // end main method  
} // end class
```

```
public class Main {  
    public static void main (String[] args) {  
        int beerNum = 99;  
        String word = "bottles";  
  
        while (beerNum > 0) {  
  
            if (beerNum == 1) {  
                //singular, as in ONE bottle.  
                word = "bottle";  
            }  
  
            } // end while loop  
        } // end main method  
    } // end class
```
