

Start

```
int n = enter a number  
int i = 1
```

End

```
import java.util.Scanner;  
class Main {  
    public static void main(String[] args) {  
        Scanner input = new Scanner(System.in);  
        System.out.println("Please insert a number:");  
        int n = Integer.parseInt(input.next());  
  
    }  
}
```

```
import java.util.Scanner;
class Main {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        System.out.println("Please insert a number:");
        int n = Integer.parseInt(input.next());
        for(int i = 1; i <= 10; i++){
            System.out.println(n * i);
        }
    }
}
```
