```
import java.util.Scanner;
class Main {
  public static void main(String[] args) {
    Scanner input = new Scanner(System.in);
    System.out.println("Please insert a number:");
    int n = Integer.parseInt(input.next());
    for(int i = 1; i <= 10; i++){
      System.out.println(n * i);
    }

  }
}
```

```java
import java.util.Scanner;
class Main {
  public static void main(String[] args) {
    Scanner input = new Scanner(System.in);
    System.out.println("Please insert a number:");
    int n = Integer.parseInt(input.next());
    for(int i = 1; i <= 10; i++){
      System.out.println(n * i);
    }
    System.out.println("done.");
  }
}
```
