# while

do-while

- do-while: the loop body is executed at least once

- while: the loop body could be never executed

Exercise

- We are going to write a program that asks the user to enter two numbers and an option:

  - "s" to sum

  - "m" to multiply

- As long as the user enters something different from "s" or "m", the program will ask the user to enter an option again

- The program will show the result of the selected operation
